

Energy Management

Energy costs deserve the same close scrutiny and management other operational costs receive. Developing an effective energy management plan, and monitoring progress, requires specialist and technical expertise that is not often available in-house.

You will receive information you need to make decisions, on an ongoing basis - independent of any product or service provider in the market so we can make the best decision for your situation.

Availability

Specialised resources available to you when you need them, as you need them.

Monitoring

Monitoring of your energy, and sub-metering as required, doesn't need to be complex or expensive, and it allows responsive management. We will:

- Develop the monitoring system appropriate to your facility
- Implement monitoring systems and sub-metering as required

Review

Regular reviews detailing:

- Your past and current consumption – daily patterns, trends, analysis, etc
- Recommended actions for the upcoming period
- Detailed business cases, brought to a level management can make a business decision (including payback periods, technology, regulatory requirements, implementation costs and a monitoring plan for investments/upgrades as agreed)
- Progress made

Implementation

Implementation – getting it done - the most challenging part of achieving energy efficiency. We will:

- Ensure guaranteed savings or performance contracts
- Prepare technical specifications or design briefs, and prepare tender or RFQ documents
- Obtain and evaluate appropriate quotes
- Benchmark, monitor, and verify savings
- Access the Energy Savings Scheme and other funding opportunities
- Inspect installations to verify implementation and commissioning
